

# **The Calderon problem with partial data**

Mikko Salo, University of Jyväskylä

[mikko.j.salo@jyu.fi](mailto:mikko.j.salo@jyu.fi)

The Calderon problem with partial data asks to determine the electrical conductivity of a body from electrical measurements made on certain subsets of the boundary. This is a fundamental inverse problem that has seen substantial advances in recent years. We will discuss such advances in three and higher dimensions based on complex geometrical optics solutions and geodesic ray transforms. This is a joint work with Carlos Kenig (Chicago).
